src/user_interface/ wifi_portal.cpp	1664
test/servo_test/ test.cpp	1672

Chapter 3

Class Documentation

3.1 qrcodegen_Segment Struct Reference

```
#include <qrcodegen.h>
```

Collaboration diagram for qrcodegen_Segment:

qrcodegen_Segment
+ mode + numChars + data + bitLength

Public Attributes

- enum [qrcodegen_Mode](#) mode
- int [numChars](#)
- uint8_t * [data](#)
- int [bitLength](#)

3.1.1 Detailed Description

Definition at line [109](#) of file [qrcodegen.h](#).

3.1.2 Member Data Documentation

3.1.2.1 bitLength

```
int qrcodegen_Segment::bitLength
```

Definition at line 125 of file [qrcodegen.h](#).

Referenced by [getTotalBits\(\)](#), [qrcodegen_encodeBinary\(\)](#), [qrcodegen_encodeSegmentsAdvanced\(\)](#), [qrcodegen_encodeText\(\)](#), [qrcodegen_makeAlphanumeric\(\)](#), [qrcodegen_makeBytes\(\)](#), [qrcodegen_makeEci\(\)](#), and [qrcodegen_makeNumeric\(\)](#).

3.1.2.2 data

```
uint8_t* qrcodegen_Segment::data
```

Definition at line 120 of file [qrcodegen.h](#).

Referenced by [addEccAndInterleave\(\)](#), [drawCodewords\(\)](#), [drawFormatBits\(\)](#), [qrcodegen_encodeBinary\(\)](#), [qrcodegen_encodeSegmentsAdvanced\(\)](#), [qrcodegen_encodeText\(\)](#), [qrcodegen_makeAlphanumeric\(\)](#), [qrcodegen_makeBytes\(\)](#), [qrcodegen_makeEci\(\)](#), [qrcodegen_makeNumeric\(\)](#), and [reedSolomonComputeRemainder\(\)](#).

3.1.2.3 mode

```
enum qrcodegen_Mode qrcodegen_Segment::mode
```

Definition at line 111 of file [qrcodegen.h](#).

Referenced by [calcSegmentBitLength\(\)](#), [getTotalBits\(\)](#), [numCharCountBits\(\)](#), [qrcodegen_calcSegmentBufferSize\(\)](#), [qrcodegen_encodeBinary\(\)](#), [qrcodegen_encodeSegmentsAdvanced\(\)](#), [qrcodegen_encodeText\(\)](#), [qrcodegen_makeAlphanumeric\(\)](#), [qrcodegen_makeBytes\(\)](#), [qrcodegen_makeEci\(\)](#), and [qrcodegen_makeNumeric\(\)](#).

3.1.2.4 numChars

```
int qrcodegen_Segment::numChars
```

Definition at line 116 of file [qrcodegen.h](#).

Referenced by [calcSegmentBitLength\(\)](#), [getTotalBits\(\)](#), [qrcodegen_calcSegmentBufferSize\(\)](#), [qrcodegen_encodeBinary\(\)](#), [qrcodegen_encodeSegmentsAdvanced\(\)](#), [qrcodegen_encodeText\(\)](#), [qrcodegen_makeAlphanumeric\(\)](#), [qrcodegen_makeBytes\(\)](#), [qrcodegen_makeEci\(\)](#), and [qrcodegen_makeNumeric\(\)](#).

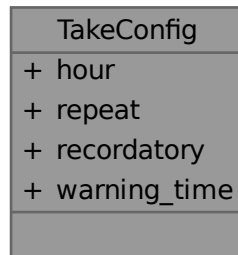

The documentation for this struct was generated from the following file:

- [lib/qrcodegen/qrcodegen.h](#)

3.2 TakeConfig Struct Reference

```
#include <pill_takes.h>
```

Collaboration diagram for TakeConfig:

Public Attributes

- char [hour](#) [6]
- bool [repeat](#) [7]
- bool [recordatory](#)
- int [warning_time](#)

3.2.1 Detailed Description

Definition at line 6 of file [pill_takes.h](#).

3.2.2 Member Data Documentation

3.2.2.1 hour

```
char TakeConfig::hour[6]
```

Definition at line 7 of file [pill_takes.h](#).

Referenced by [edit_takes_screen\(\)](#).

3.2.2.2 recordatory

```
bool TakeConfig::recordatory
```

Definition at line 9 of file [pill_takes.h](#).

Referenced by [edit_takes_screen\(\)](#), and [uploadTakes\(\)](#).

3.2.2.3 repeat

```
bool TakeConfig::repeat[7]
```

Definition at line 8 of file [pill_takes.h](#).

Referenced by [edit_takes_screen\(\)](#), [is_take_today\(\)](#), [refresh_days_buttons\(\)](#), [repetition_screen\(\)](#), and [uploadTakes\(\)](#).

3.2.2.4 warning_time

```
int TakeConfig::warning_time
```

Definition at line 10 of file [pill_takes.h](#).

Referenced by [edit_takes_screen\(\)](#), and [uploadTakes\(\)](#).

The documentation for this struct was generated from the following file:

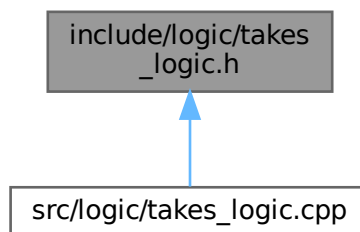

- [include/user_interface/pill_takes.h](#)

Chapter 4

File Documentation

4.1 include/logic/takes_logic.h File Reference

This graph shows which files directly or indirectly include this file:

Functions

- void [chackTakes](#) ()
- void [executeTakes](#) (int index)

4.1.1 Function Documentation

4.1.1.1 chackTakes()

```
void chackTakes ( )
```

4.1.1.2 executeTakes()

```
void executeTakes (
    int index )
```

4.2 takes_logic.h

[Go to the documentation of this file.](#)

```
00001 #pragma once
00002
00003 void chackTakes();
00004 void executeTakes(int index);
```

4.3 include/lv_conf.h File Reference

00039 // Regarding all public and private functions defined in this source file:
00040 // - They require all pointer/array arguments to be not null unless the array length is zero.
00041 // - They only read input scalar/array arguments, write to output pointer/array
00042 //   arguments, and return scalar values; they are "pure" functions.
00043 // - They don't read mutable global variables or write to any global variables.
00044 // - They don't perform I/O, read the clock, print to console, etc.
00045 // - They allocate a small and constant amount of stack memory.
00046 // - They don't allocate or free any memory on the heap.
00047 // - They don't recurse or mutually recurse. All the code
00048 //   could be inlined into the top-level public functions.
00049 // - They run in at most quadratic time with respect to input arguments.
00050 //   Most functions run in linear time, and some in constant time.
00051 // - There are no unbounded loops or non-obvious termination conditions.
00052 // - They are completely thread-safe if the caller does not give the
00053 //   same writable buffer to concurrent calls to these functions.

00145
00146
00147
00148 /*---- Functions (high level) to generate QR Codes ----*/
00149
00150 /*
00151  * Encodes the given text string to a QR Code, returning true if successful.
00152  * If the data is too long to fit in any version in the given range
00153  * at the given ECC level, then false is returned.
00154  *
00155  * The input text must be encoded in UTF-8 and contain no NULs.
00156  * Requires 1 <= minVersion <= maxVersion <= 40.
00157  *
00158  * The smallest possible QR Code version within the given range is automatically
00159  * chosen for the output. Iff boostEcl is true, then the ECC level of the result
00160  * may be higher than the ecl argument if it can be done without increasing the
00161  * version. The mask is either between qrcodegen_Mask_0 to 7 to force that mask, or
00162  * qrcodegen_Mask_AUTO to automatically choose an appropriate mask (which may be slow).
00163  *
00164  * About the arrays, letting len = qrcodegen_BUFFER_LEN_FOR_VERSION(maxVersion):
00165  * - Before calling the function:
00166  *   - The array ranges tempBuffer[0 : len] and qrcode[0 : len] must allow
00167  *     reading and writing; hence each array must have a length of at least len.
00168  *   - The two ranges must not overlap (aliasing).
00169  *   - The initial state of both ranges can be uninitialized
00170  *     because the function always writes before reading.
00171  * - After the function returns:
00172  *   - Both ranges have no guarantee on which elements are initialized and what values are stored.
00173  *   - tempBuffer contains no useful data and should be treated as entirely uninitialized.
00174  *   - If successful, qrcode can be passed into qrcodegen_getSize() and qrcodegen_getModule().
00175  *
00176  * If successful, the resulting QR Code may use numeric,
00177  * alphanumeric, or byte mode to encode the text.
00178  *
00179  * In the most optimistic case, a QR Code at version 40 with low ECC
00180  * can hold any UTF-8 string up to 2953 bytes, or any alphanumeric string
00181  * up to 4296 characters, or any digit string up to 7089 characters.
00182  * These numbers represent the hard upper limit of the QR Code standard.
00183  *
00184  * Please consult the QR Code specification for information on
00185  * data capacities per version, ECC level, and text encoding mode.
00186  */

00192  * Encodes the given binary data to a QR Code, returning true if successful.
00193  * If the data is too long to fit in any version in the given range
00194  * at the given ECC level, then false is returned.
00195  *
00196  * Requires 1 <= minVersion <= maxVersion <= 40.
00197  *
00198  * The smallest possible QR Code version within the given range is automatically
00199  * chosen for the output. Iff boostEcl is true, then the ECC level of the result
00200  * may be higher than the ecl argument if it can be done without increasing the
00201  * version. The mask is either between qrcodegen_Mask_0 to 7 to force that mask, or
00202  * qrcodegen_Mask_AUTO to automatically choose an appropriate mask (which may be slow).
00203  *
00204  * About the arrays, letting len = qrcodegen_BUFFER_LEN_FOR_VERSION(maxVersion):
00205  * - Before calling the function:
00206  *   - The array ranges dataAndTemp[0 : len] and qrcode[0 : len] must allow
00207  *     reading and writing; hence each array must have a length of at least len.
00208  *   - The two ranges must not overlap (aliasing).
00209  *   - The input array range dataAndTemp[0 : dataLen] should normally be
00210  *     valid UTF-8 text, but is not required by the QR Code standard.
00211  *   - The initial state of dataAndTemp[dataLen : len] and qrcode[0 : len]
00212  *     can be uninitialized because the function always writes before reading.

```

```

00213 * - After the function returns:
00214 *   - Both ranges have no guarantee on which elements are initialized and what values are stored.
00215 *   - dataAndTemp contains no useful data and should be treated as entirely uninitialized.
00216 *   - If successful, qrcode can be passed into qrcodegen_getSize() and qrcodegen_getModule().
00217 *
00218 * If successful, the resulting QR Code will use byte mode to encode the data.
00219 *
00220 * In the most optimistic case, a QR Code at version 40 with low ECC can hold any byte
00221 * sequence up to length 2953. This is the hard upper limit of the QR Code standard.
00222 *
00223 * Please consult the QR Code specification for information on
00224 * data capacities per version, ECC level, and text encoding mode.
00225 */
